LED LIGHT STRING
(OPTIONAL, ADD-ON LIGHTING FOR A NEW OR EXISTING SOLAR ILLUMINATIONS LIGHTING SYSTEM)

Add Holiday Sparkle to Your Existing Solar Lighting System!

REMOTE CONTROL

Are you considering purchasing, or do you already own, a solar-powered lighting system from Solar Illuminations? Did you know you can easily add a string of LED lights to your system?

Community entrances, residential developments, sub-divisions, HOA, and business signs often have the holiday spirit applied with decorative garlands and wreaths. Why not make those decorations even more eye-catching with a string of LED lights powered by the same solar lighting system already illuminating your sign, street, trees, landscaping or parking lot?

Our long string of LED lights is ideal for many holiday decorating applications, adding a festive touch without the need for a separate power source. Installation couldn't be easier! Simply plug the LED light string into the outlet on your Solar Illuminations battery enclosure, and it will operate alongside your existing lighting. No connection to the grid required. When the holiday season is over, just unplug the light string and carefully store it away until next year.

It's a very simple, cost-effective, and convenient way to add a little extra holiday cheer. Check out these features:

- **This pre-plugged light string is approximately 170' (50M) long**
- **It contains 500 evenly spaced, safe, low-voltage, super-bright LEDs**
- **Remote control included for user color/mode/dimming selection**
- **User selectable choice of warm white (3,000k) or multi-color (RGB)**
- **11 selectable modes (4 different steady-on and 7 different blinking)**
- **4 selectable dimming modes (100%, 75%, 50%, and 25% options)**
- **Join up to two strings together or use multiple individual strings**
- **IP55 weather rated (for indoor or outdoor use)**
- **Includes 18' of cord as standard before the first LED light begins**
- **Other colors and lengths available by special order**
